ATOORSANAT

## PRODUCTION SITE AND PRODUCTION TECHNOLOGY

ELK Motor has been founded by major shareholders of Yılmaz Redüktör A.Ş. as the continuation of the product family. ELK motor manufactures electric motors from 71 up to and including 180 IEC frame size in a 40.000m<sup>2</sup> closed area built on a 100.000m<sup>2</sup> open area.

ELK motors are designed and manufactured completely in accordance with European standard with its whole product range. IE2 and IE3 efficiency classes are available in full product range currently.

**ELK**  
MOTOR

## IE2 and IE3 Motors

The main design and technology of ELK motor is completely suitable to the IE3 efficiency class. Since the outside dimensions of the IE3 and IE2 design are completely same the replacement of the IE2 motor with IE3 motors will be done easily.

In addition to the motors according to the European standards, ELK motor also manufactures special motors for its customers to decrease the cost and increase the productivity.

ATOORSANAT

## ELK Motors;

From engineering to manufacturing processes ELK motors are completely manufactured in our factory located in Çerkezköy, 100km far away from Istanbul.

Motor shafts and end shields are manufactured by fully automatic CNC machines under a continuous quality control. The rotor and stator cores are manufactured in our fully automatic punching and interlocking lines.

# ATOORSANAT

After injecting the pure aluminum into the rotor cores in a fully automatic rotor injection line the rotor cores becomes ready for assembly. In automatic winding lines stator cores are wound and varnished either by automatic dipping method or VPI (Vacuum Pressure Impregnation) method according to the needs and usage area. So the products are always in the best levels of quality and performance.

After all of these operations, our motors which are assembled in accordance with product prescriptions, are being tested and controlled fully for the last time and shipped to the customers after packaging.

**ELK**  
MOTOR

## TECHNICAL INFORMATION

All of our standard products are designed, manufactured, and tested according to the IEC and EN standards given below:

IEC 60034-1	Rating and performance
IEC 60034-2-1	Methods for determining losses and efficiency
IEC 60034-5	Classification of degrees of protection
IEC 60034-6	Methods of cooling
IEC 60034-7	Symbols of construction and mounting arrangements
IEC 60034-8	Terminal markings and direction of rotation
IEC 60034-9	Noise limits
IEC 60034-11	Built-in thermal protection
IEC 60034-14	Vibration limits
IEC 60034-18-1	Functional evaluation of insulation system
IEC 60034-30	Efficiency classes (IE-code)
IEC 60038	Standard voltages
EN 50347	Dimensions and output for electrical machines

EN 55014-1	} Electromagnetic compatibility
EN 61000-3-2	
EN 61000-3-3	

According to IEC 60034-1, catalogue values are permitted to deviate from the real values as follows:

<b>Speed (n)</b>	$\Delta n = \pm 20\% (n_s - n_N), P_N > 1 \text{ kW}$ $\Delta n = \pm 30\% (n_s - n_N), P_N \leq 1 \text{ kW}$
<b>Efficiency %(<math>\eta</math>)</b>	$\Delta \eta = -15\% (100 - \eta_N), P_N \leq 150 \text{ kW}$ $\Delta \eta = -10\% (100 - \eta_N), P_N > 150 \text{ kW}$
<b>Power factor (cos <math>\phi</math>)</b>	$\text{Cos } \phi = -1/6 (1 - \text{Cos } \phi)$
<b>Locked rotor current (<math>I_{LN}</math>)</b>	$\Delta (I_{LN}) = +20\% (I_{LN})$
<b>Starting Torque (<math>M_L/M_N</math>)</b>	min. ( $M_L/M_N$ ) = -15% ( $M_L/M_N$ ) max. ( $M_L/M_N$ ) = +25% ( $M_L/M_N$ )
<b>Break down Torque (<math>M_K/M_N</math>)</b>	$(M_K/M_N) = -10\% (M_K/M_N)$
<b>Moment of Inertia (J) [kgm<sup>2</sup>]</b>	$\Delta J = \pm 10\% J$
<b>Sound Pressure Level (<math>L_{PA}</math>) [dB(A)]</b>	$L_{PA} = +3 \text{ dB (A)}$

## TECHNICAL INFORMATION

### MECHANICAL CONSTRUCTION

71-132 frame size ELK Motors provides flexibility for different mounting types through their detachable feet which can be mounted on three sides. This feature allows terminal box assembly on the desired side. Terminal box is on the top for standard motors. 160 and 180 frame size motors have fixed feet construction.

#### FRAME SIZE 71-132

#### FRAME SIZE 160-180

Additionally the housing and end shields are designed symmetrically for all of the frame sizes, so that the drive and non-drive side end shields can be replaced and the direction of the rotor shaft group can be changed. By making this end shields and rotor shaft group modifications the user can have a motor with terminal box is at the non-drive side keeping the distance C according to the standard.

The row materials that we use in our motor depending on the frame size are listed below.

Frame Size	Housing	End Shields	Terminal Box and Cover	Feet	Fan Cover	Fan
71	Aluminum	Aluminum	Aluminum	Steel	Steel	Plastic
80	Aluminum	Aluminum	Aluminum	Steel	Steel	Plastic
90	Aluminum	Aluminum	Aluminum	Steel	Steel	Plastic
100	Aluminum	Aluminum	Aluminum	Steel	Steel	Plastic
112	Aluminum	Aluminum	Aluminum	Steel	Steel	Plastic
132	Aluminum	Aluminum	Aluminum	Steel	Steel	Plastic
160	Cast Iron	Cast Iron	Cast Iron	Cast Iron	Steel	Plastic
180	Cast Iron	Cast Iron	Cast Iron	Cast Iron	Steel	Plastic

## TECHNICAL INFORMATION

### ELECTRICAL CONSTRUCTION

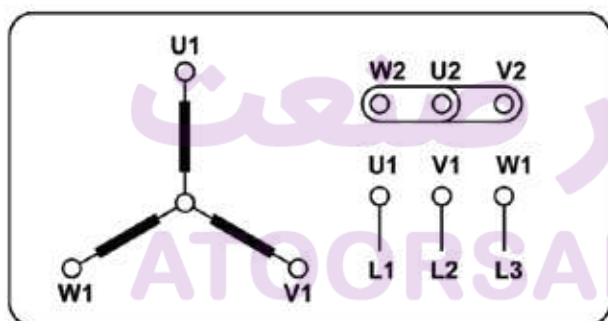

Our standard motors have insulation Class F while the temperature rise is Class B. This means the motors will have a longer service life and work under hard conditions.

Upon the customer's request, Class H insulation motors are manufactured.

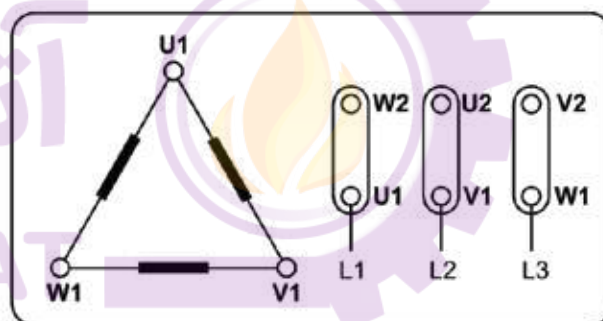

### ELECTRICAL CONNECTIONS

Frame Size	71 - 80 - 90	100 - 112 - 132	160 - 180
Cable Glands	M20 + M16	M25 + M25	M32 + M32

The motors shall be connected in star or delta according to rated voltage given in their nameplate and the network voltage that they will be connected. For phase to phase 400 V supply the motors with 230/400V nameplate values shall be connected in star and the motors with 400/690V nameplate values shall be connected in delta.

Y Star Connection

Δ Delta Connection

### RUNNING THE MOTORS AT 60Hz NETWORK

Our standard motors that have been manufactured for 50 Hz power supply can be used at 60 Hz network. The ratios given below indicate changes in the given rated values.

50 Hz Rated Voltage	60 Hz Supply Voltage	Rated Speed	Rated Power	Rated Torque	Rated Current	Starting Torque	Break Down Torque	Starting Current
230V	220V	1.193	1	0.84	0.97	0.77	0.8	0.8
400V	380V	1.193	1	0.84	0.97	0.77	0.8	0.8
400V	440V	1.20	1.16	0.97	0.98	0.87	0.9	0.9

## TECHNICAL INFORMATION

### SPEED CONTROL AND DRIVERS

Standard ELK motors are suitable for electronic speed control operations. The frequency range that the motor can be driven with their fan is given below with blue line. If the motor will be driven in a wider range then an external fan is necessary. By using an external fan the motors can be driven in the range defined by red line.

### ENVIRONMENTAL CONDITIONS

Motors are designed to operate at ambient temperature up to 40°C according to IEC 60034-1. Rated output will change at the % ratings given below for different ambient temperatures

Ambient Temperature	<30 °C	35 °C	40 °C	45 °C	50 °C	55 °C	60 °C
% Power Ratio	105	102	100	97	93	87	82

## TECHNICAL INFORMATION

### BEARINGS

Standard motors are equipped with deep groove ball bearings with ZZ shields as listed below according to the frame size. NU NJ type bearing are optional.

Frame Size	Drive Side End Shield	Non Drive Side End Shield
71	6202 ZZ	6202 ZZ
80	6204 ZZ	6204 ZZ
90	6205 ZZ	6205 ZZ
100	6206 ZZ	6206 ZZ
112	6206 ZZ	6206 ZZ
132	6208 ZZ	6208 ZZ
160	6309 ZZ	6209 ZZ
180	6310 ZZ	6210 ZZ

### Overhung Load (F<sub>R</sub>):

Overhung load can be calculated according to below written formulae. Calculated overhung load must be below permissible overhung loads given at tables (F<sub>R</sub> < F<sub>Rx</sub>).

$$F_R = k \cdot \frac{P}{D \cdot n} \cdot 10^7 \text{ (N)}$$

- P: Motor power (kW)  
D: Pulley diameter (mm)  
n: Motor speed (rpm)  
k: Overhung load factor
- Spur gears, chain drives with low speed = 2,1
  - Trigger belts = 2,5
  - V type belts = 5

### Correction of Permissible Overhung Load (F<sub>Rx</sub>):

If the overhung load is applied between points x<sub>0</sub> and x<sub>max</sub>, the permissible overhung load can be corrected with the following formulae.

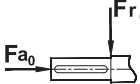

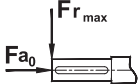

$$F_{R_x} = F_{R_0} - \frac{x}{E} (F_{R_0} - F_{R_{max}})$$

F<sub>R</sub> < F<sub>Rx</sub>: Calculated overhung load must be below permissible overhung loads given at tables.

Fa: Axial load  
F<sub>R0</sub>: Permissible overhung load at shaft shoulder  
F<sub>Rmax</sub>: Permissible overhung load at shaft end point  
Permissible loads are calculated for L<sub>n10</sub> 20000 h bearing lifetimes according to ISO 281

Fa<sub>0</sub>: Permissible axial load

Fr: Overhung Load

Fr<sub>0</sub>: Permissible overhung load at shaft shoulder

Fr<sub>max</sub>: Permissible overhung load at shaft end point

Permissible loads are calculated for L<sub>n10</sub> 20000 h bearing lifetimes according to ISO 281.

## AXIAL LOADS

### VERTICAL MOUNTING – Shaft Extension Pointing Upwards - Permissible Axial Loads

Mounting Positions IM: V3, V6, V19, V35, V37

Frame Size	Push			Pull
	$F_r=0$	$F_r = F_{r_0}$	$F_r = F_{r_{max}}$	$F_r=0$
<b>2 Poles 3000 rpm</b>	$F_{a_0}$ [N]	$F_{a_0}$ [N]	$F_{a_0}$ [N]	$F_{a_0}$ [N]
